## OBJECTIVE

---

Having been a computer fanatic since my childhood, I started working for various companies at the age of 18. At 20, I co-founded my first company that we scaled to 7 digits revenue. I am looking for a new challenge in demanding environments to use my technical and management skills to make an impact

## EXPERIENCE

---

### Founding Software Engineer

Ahead Health AG

September 2025 - present

*Zürich, CH*

- Building and optimizing the booking flow and end-to-end user journeys to ensure a seamless transition from landing pages to scheduled appointments.
- Laying the technical foundation for marketing systems, specifically implementing the infrastructure for automated emails, user targeting, and retargeting logic.
- Supporting user acquisition initiatives by developing the necessary technical tools, tracking, and integrations required by the marketing team.
- Developing clinical product features, translating medical requirements into functional software components.

### Head of Engineering

N-Dream AG / AirConsole

May 2023 - September 2025

*Zürich, CH*

- Spearheaded day-to-day operations of a high-performing team of six engineers, plus an overseas counterpart team.
- Drove strategic integrations with leading automotive partners, including BMW and VW Group. Achieved a 90% reduction in integration time, from two years to just three months, through product standardization.
- Delivered innovative PoCs and R&D projects tailored to automotive customer needs.
- Architected and led the implementation of an Android Chromium solution for automotive environments; served as the primary contributor for a standardized web runtime now deployed across all global OEMs to guarantee universal app compatibility.
- Navigated complex migrations (Python 2 to Python 3, App Engine, Cloud Run, CDN) via hands-on leadership, maintaining operational continuity until the 2025 KPIT acquisition and exiting following the completion of the deal.

### Senior Fullstack Software Engineer

N-Dream AG / AirConsole

November 2022 - May 2023

*Zürich, CH*

- All-rounder committed to enhance user experience by effectively troubleshooting and refining products across various platforms for optimal performance.
- Implemented CI/CD tool (it was non-existent) and fostered development processes, including peer reviews and pair programming, to elevate code quality.
- Undertook multiple technical explorations to decrease uncertainties and implementation time.
- Migrated legacy Analytics to Google Analytics 4 (including our homemade tools)
- Took ownership of the GAE backend and the native apps (Android TV & Cordova)

## Senior Fullstack Software Engineer

Quatico AG

July 2021 - November 2022

Zürich, CH

- Built the new version of the website (from scratch) of our biggest customer ([MeteoSwiss](#))
- Brought expertise mostly in frontend (React in Typescript).
- Applied software best practices (Outside-In TDD, Clean Code).
- Responsible for all frontend framework integrations (Maplibre, Highcharts) and led the team to the project delivery
- The project won Master of Swiss Web 2023

## Co-Founder & CTO

JobNinja GmbH

May 2015 - July 2021

Munich, DE

- Founded the company, built the whole software (PostgreSQL - SQLAlchemy - Flask - React / React Native)
- Convinced 2 investors (including HR4YOU AG) and scaled it to 7 digits revenue.
- Managed a team of 4 Software Developers and oversaw a team of 15.
- Active since July 2021 as a member of the board & technical advisor; I help the team continue to innovate and stay at the edge of the recruiting market.

## SKILLS

---

<b>Javascript</b>	10 years	<b>French</b>	native
<b>Python Backend (Flask / GAE)</b>	8 years	<b>English</b>	excellent
<b>React / React Native</b>	5 years	<b>German</b>	excellent
<b>Typescript</b>	3 years		
<b>Android (Java)</b>	3 years		
<b>PostgreSQL</b>	2 years		

## EDUCATION

---

**Computer Science**, TU München

2014 - 2016

As JobNinja quickly gained traction with the introduction of the Pay Per Applicant model in Germany, it became clear that scaling the business and continuing my studies in parallel was no longer sustainable - so I chose to focus fully on the venture.

**Completed courses:** Algebra, Discrete Mathematics, Algorithm, OS, Databases, Research Internship on [DroidForce](#)

## PROJECTS

---

**Personal Blog** Sharing my software engineering journey, where I tackle fascinating challenges as both a hands-on engineer and a tech-savvy manager. [meyer-laurent.com](#)

**BetterJobAd.com** A small project showcasing AI to write better job applications. This free tool has found a sponsor and has been used by more than 100 different companies to generate good, accurate and inclusive job offers. [betterjobad.com](#)

**SaferPDF** A privacy-focused SaaS that compresses PDFs directly in your browser using Ghostscript and WebAssembly (WASM), ensuring your files never leave your device. Unlike other solutions, it guarantees complete confidentiality while delivering fast and efficient compression. The project is open source and available on [GitHub](#). [saferpdf.com](#)
